

DESK REFERENCE - V1

The Banker Prompt Formula

A one-page structure for turning vague AI requests into safe, review-ready banker prompts.

Role. Task. Source. Format. Constraints. Review.

Use this formula before every work prompt. It helps the banker define the job, strip sensitive inputs, require a useful format, and keep responsibility with a human reviewer.

ROLE

Who should AI act as?

Example: "You are assisting a branch operations trainer." Do not ask AI to act as the final approver, lender, investigator, compliance officer, or legal authority.

TASK

What should it produce?

Draft, summarize, rewrite, extract, compare, checklist, critique, scenario, data-to-narrative, or solution brief. Use draft support, not decisions.

SOURCE

What approved material should it use?

Name the public, internal, redacted, or synthetic source. If the source contains sensitive data, stop and reclassify before prompting.

CONSTRAINTS

What must it not do?

Do not invent facts, rates, fees, dates, policy requirements, legal conclusions, fraud findings, or credit reasons.

FORMAT

What format should the answer use?

Bullets, table, checklist, email draft, script, FAQ, SOP, memo, markdown, or evidence packet. Pick the format before generating.

REVIEW

What needs human review?

Mark uncertain items [VERIFY]. Name the reviewer and escalation trigger before copying output downstream.

Copy-ready starter

You are assisting [ROLE] with [TASK].
Use only [APPROVED SOURCE].
Do not use or request prohibited data.
Return [OUTPUT FORMAT].
Do not invent facts or make a decision. Preserve source meaning. Mark uncertain items [VERIFY].
[REVIEWER] will review before final use.
Escalate if [TRIGGER] appears.
