

IT / InfoSec Playbook

Decide which tools, which data, and which people — defensibly.

A playbook for the people who own the tool stack and the NPI boundary. Classify data, vet tools, document the verdict, and help business teams adopt approved AI without bypassing you.

PLAYBOOK SNAPSHOT

IT / InfoSec Enablement Map

Primary Goal

Defensible verdict

Core Artifact

Tool verdict log

Risk Focus

NPI + access

Data classification clarity

56/100

Allowed-tool catalog

62/100

Shadow-AI visibility

38/100

Identity + access governance

70/100

Recommended path

Maturity Assessment → Foundation Course → Data Classification → Sandbox

USE-CASE MAP

Where IT / InfoSec can use AiBI immediately.

Concrete, role-specific use cases replace generic AI advice.

HIGH RISK

Render a tool verdict

Document the data classes, controls, and approval status for a candidate AI tool.

Artifact

Tool verdict packet

HIGH RISK

Run a data-classification check

Map a workflow to the data classes touched and surface NPI exposure points.

Artifact

Data class map

MED RISK

Draft a shadow-AI advisory

Brief the business on which tools to stop using and what is approved instead.

Artifact

Shadow-AI advisory

MED RISK

Build an access-review checklist

Document who can access an approved AI tool, with what data, under what review.

Artifact

Access review checklist

IT OPERATING MODEL

A verdict cycle the business will follow.

01

Intake

Capture the request: tool, vendor, data classes, use case, requesting team.

Artifact produced

Tool intake form

02

Verdict

Run the data-class + control + retention checks. Decide approved / restricted / blocked with reasons.

Artifact produced

Tool verdict

03

Publish

Add to the allowed-tools catalog with conditions. Brief the business via the standard advisory format.

Artifact produced

Catalog update + advisory

04

Monitor

Re-review on a cadence. Look for shadow-AI use and adjust the verdict if vendor security posture changes.

Artifact produced

Periodic re-review log

REVIEW CHECKLIST

Before AI output is used.

Data classes touched are documented

TOOLBOX ASSETS

The playbook ships real tools.

A strong role playbook ends with downloadable, customizable work products — not slides.

IT / INFOSEC PLAYBOOK

Be the team the business asks first — not the team they bypass.

Clear verdicts, publishable advisories, and a catalog that actually answers the question. That is the difference between InfoSec as gatekeeper and InfoSec as enabler.
