

The Bank AI Use-Case Inventory Card

Reference card · For community banks and credit unions

A one-page register for tracking AI workflows, owners, data classes, risk tiers, human review, evidence, and review cadence.

Use one row per AI-touched workflow. A use case is the task, not only the tool name. If one vendor supports three workflows, record three rows.

Maintain it for the right conversations

Maintain the inventory for your AI committee, risk review, vendor oversight, audit prep, and examiner conversations. Do not treat this card as exam readiness by itself; it is the starting record that makes oversight possible.

The AIEOG AI Lexicon defines an AI use-case inventory as a maintained record supporting governance, transparency, and risk management. The Lexicon is an optional shared-vocabulary tool, not a supervisory mandate.

Start with the 30-minute AI Inventory Sprint

1. Ask every department where AI, GenAI, embedded AI, or vendor AI features touch work today.
2. Separate the workflow from the system name.
3. Classify data class and risk tier separately.
4. Assign one accountable owner.
5. Record human review, evidence retained, last review date, and next review date.

Core register columns

Column	What to record
Workflow	The actual task, not the system name.
Tool / vendor	Product, vendor, embedded feature, internal model, or public tool.
Use-case status	Proposed, sandbox, approved, restricted, retired, or blocked.
Data class	Public, internal, confidential, NPI, or regulated / exam-sensitive.
Risk tier	Low, medium, high, or blocked. Keep this separate from data class.
Customer impact?	Yes / no. Include whether output may affect service, eligibility, pricing, fraud, collections, or communications.
Regulated workflow?	Lending, BSA/AML, fraud, complaints, marketing, HR, regulatory reporting, or none.
Owner	A person, not a committee or generic department.
Human review	None, sampled, mandatory, second-line, or committee approval.
Evidence retained	Prompt, output, ticket, reviewer note, approval, vendor review, or location.
Last reviewed	Date the row was last confirmed.
Next review	Date or cadence for the next review.

Vendor-control add-on

For vendor or embedded AI features, add fields for due diligence status, contract review, data-use terms, model-training terms, retention/deletion, subcontractors, breach notice, regulatory access, ongoing monitoring owner, and termination / data-return plan.

Risk-tier guide

Tier	Definition
Low	Internal drafting, public or approved internal data, no customer impact, no regulated decision, approved tool, and human review before use.
Medium	Internal process support, customer-facing draft content, confidential internal data, or operational workflow support where human review is required.
High	Decision support for credit, fraud, BSA/AML, sanctions, complaints, regulatory reporting, customer-impacting workflows, or NPI used only in an approved private environment.
Blocked	Public AI tool with NPI, SAR/AML detail, examination-sensitive information, privileged material, security controls, or final regulated decisions.

Model-risk note

Where an AI use case informs quantitative, customer-impacting, or regulated decisions, evaluate whether model-risk controls apply under current guidance, including SR 26-2 where applicable. For generative AI workflows, maintain inventory, ownership, data controls, vendor oversight, human review, and review cadence even when the workflow is not treated as a formal model.

Sample rows

Example	Use case	Data class	Risk tier	Required control
Low	Summarize public regulator press releases for internal training.	Public	Low	Human editor confirms accuracy before training use.
Medium	Draft customer email language using approved templates and no customer data.	Internal	Medium	Marketing and Compliance review before sending.
High	Analyze fraud patterns in an approved enterprise environment.	NPI / regulated	High	Mandatory review, vendor controls, evidence retention, quarterly review.
Blocked	Enter loan-file details or SAR investigation notes into a public AI tool.	NPI / SAR-sensitive	Blocked	Do not use. Escalate to AI Program Owner and Compliance.

Next step

Download the editable AI Use-Case Inventory Spreadsheet: </downloads/artifact-ai-use-case-inventory-spreadsheet.xlsx>

Use the spreadsheet to track owner, data class, risk tier, vendor status, human review, evidence retained, last review, and next review date.

Adapt before adoption

This card is a starter artifact, not legal or compliance advice. Adapt tier definitions, approval roles, cadence, data classes, and vendor-control fields to your institution's size, complexity, charter, regulator, data standards, and third-party risk program before adoption.
