

ROLE WORKFLOW KIT - OPERATIONS - V2.0

The Bank Operations AI Workflow Kit

Turn one useful AI shortcut into a documented SOP your team can run, review, measure, and hand off.

From prompt to procedure

A shortcut is not an operating improvement until someone else can run it, review it, measure it, and hand it off.

Operations teams often find the first practical AI wins: procedure cleanup, checklist drafts, handoff summaries, ticket triage, exception notes, and recurring internal briefs. The risk is that the win stays trapped in one person's prompt history. Operational value appears when the workflow is documented, reviewed, handed off, and measured.

WHAT'S INSIDE

- | | |
|--|--------------------------------|
| 1. Executive snapshot | 6. Review checkpoint worksheet |
| 2. Bank operations workflow examples | 7. Time-saved tracking sheet |
| 3. Completed ACH exception handoff example | 8. Handoff readiness card |
| 4. Workflow SOP template | 9. 45-minute operations sprint |
| 5. Reusable AI working brief | 10. Source basis |

The risk line

Start with internal, low-risk work. Do not put real customer data, complaint specifics, confidential account details, or regulated decisioning material into an AI step unless the tool and workflow are formally approved for that data class.

Where operations can use AI immediately

Deposit ops procedure update

Turn a policy change into a draft procedure update and checklist for human review.

ACH exception handoff

Summarize exception status, open items, and next shift action from approved notes.

Debit dispute checklist

Draft an internal checklist from approved procedure language.

Wire callback script

Create a script from approved wire policy and escalation rules.

Branch opening / closing checklist

Convert procedure text into a step-by-step job aid.

Loan ops missing-doc summary

Summarize missing items from permitted file notes for staff review.

Call-center FAQ refresh

Draft updated answers from approved product and procedure sources.

Audit remediation status summary

Summarize owner, due date, status, and blockers from approved tracker data.

Vendor ticket triage

Classify tickets by owner, urgency, and next action without exposing prohibited data.

Monthly ops dashboard narrative

Draft a concise narrative from approved KPI data and manager notes.

ACH exception handoff summary

STEP	COMPLETED EXAMPLE
Current state	ACH exceptions are tracked in an internal queue. The outgoing associate writes a free-form handoff note, and the next associate rereads the queue to identify unresolved items.
AI step	Using only approved, redacted queue notes, AI drafts a shift handoff summary with exception ID, current status, missing information, next action, owner, and escalation flag.
Human review	The outgoing associate verifies every item against the queue, marks uncertain items [VERIFY], removes any prohibited data, and approves the final handoff note.
Output	A one-page handoff summary saved in the approved team location with date, reviewer, and queue reference.
Metrics	Manual baseline minutes, AI draft minutes, human review minutes, correction count, material correction count, and whether the next associate completed the handoff without follow-up.

Repeatable workflow model

1. **Map.** Pick one recurring internal task and write down how it actually gets done today.
2. **Brief.** Convert the prompt into a reusable AI working brief with allowed inputs, prohibited inputs, and output format.
3. **Review.** Name the human checkpoint and the criteria for approve / reject / revise.
4. **Measure.** Track baseline time, AI-assisted time, correction rate, and defects after use.
5. **Hand off.** Give the SOP to a colleague cold. If they can run it unaided, it is ready.

Document the work so the team can run it

FIELD	RESPONSE
Workflow name	
Department	
Owner and backup	
Frequency	
Current manual process	
Approved AI tool	
Permitted inputs	
Prohibited inputs	
Prompt / working brief	
Review checkpoint and criteria	
Final output	
Save location and retention rule	
Time baseline and correction-rate target	
Escalation trigger	
Last reviewed / next reviewed	

Make the prompt reusable

REUSABLE AI WORKING BRIEF

Role:

[WHO THE AI IS HELPING]

Task:

[WHAT THE AI SHOULD DRAFT, SUMMARIZE, CLASSIFY, OR ORGANIZE]

Inputs allowed:

[APPROVED SOURCE MATERIAL ONLY]

Inputs prohibited:

[CUSTOMER DATA, COMPLAINT DETAILS, CONFIDENTIAL ACCOUNT DATA, REGULATED DECISIONING MATERIAL, OR OTHER RESTRICTED DATA]

Source material:

[PASTE OR ATTACH APPROVED SOURCE MATERIAL]

Output format:

[TABLE, CHECKLIST, HANDOFF NOTE, DRAFT SOP, STATUS SUMMARY]

Constraints:

[DO NOT INVENT FACTS. MARK UNCERTAIN ITEMS [VERIFY]. DO NOT MAKE DECISIONS. USE ONLY THE SOURCE MATERIAL.]

Human review:

[NAME REVIEWER, CHECKPOINT, AND APPROVE / REJECT / REVISE CRITERIA]

Review checkpoint worksheet

FIELD	RESPONSE
Reviewer and authority	
Source checked	
Facts verified	
[VERIFY] items resolved	
Corrections made	
Escalated issues	
Approve / reject / revise	
Final-use location	

Track the value and the stop trigger

Time-Saved Tracking Sheet

METRIC	FORMULA OR ENTRY
Manual baseline minutes	Entry
AI draft minutes	Entry
Human review minutes	Entry
Total AI-assisted minutes	AI draft minutes + human review minutes
Net minutes saved	Manual baseline minutes - total AI-assisted minutes
Correction count	Entry
Material correction count	Entry
Correction rate	Correction count / total AI outputs reviewed
Handoff success	Yes / No
Defect after use	Yes / No

Stop trigger: pause if material corrections exceed X% for two consecutive runs, prohibited data enters the AI step, or a colleague cannot run the SOP without help.

Handoff Readiness Card

- ☐ Can a colleague run the SOP without the original prompt author in the room?
- ☐ Are permitted and prohibited inputs obvious?
- ☐ Is the review checkpoint named and specific?
- ☐ Can the reviewer find the source material and final-use location?
- ☐ Are escalation triggers clear?
- ☐ Were time saved, correction rate, handoff success, and post-use defects tracked?

Next step: Run the 45-Minute Operations AI Workflow Sprint

Pick one recurring internal task, map the current process, build the reusable AI brief, define the human review checkpoint, test it for one week, and create a handoff-ready SOP.

1. Select one weekly internal task with low data sensitivity.
2. Write the current manual process in five to ten steps.
3. Complete the reusable AI working brief.
4. Name the reviewer, authority, and source-check criteria.
5. Run the workflow for one week and track the time-saved sheet.
6. Hand it to a colleague and revise anything unclear.

SOURCE BASIS

Built from the AiBI readiness assessment, NIST AI RMF Govern / Map / Measure / Manage concepts, AIEOG human-review and AI-use inventory terminology, internal-control principles for documented procedures, third-party risk expectations where vendor AI features are used, and institution data-classification rules. Adapt before adoption.
