

SAMPLE READINESS REPORT · V3 FREE SNAPSHOT

Your AI Readiness Snapshot — sample

An illustrative example of the report a banker receives after the free 12-question AI Readiness Assessment. The numbers below are sample data. Take the assessment for your own score, tier, top gap, and starter artifact.

YOUR SNAPSHOT

Score, maturity tier, and top gap

Building Momentum

Top gap · Documentation

Recommended path · Save-the-prompt habit → Workflow SOP → AI use-case inventory

What the score means

A score of **36 out of 48** places this sample banker in the **Building Momentum** band. The pattern is not beginner-level awareness. It is uneven traction: several AI habits are already useful, but the work depends on memory, individual judgment, and informal handoffs. The fastest improvement is not another tool. It is making the useful work visible, reviewable, and repeatable.

FREE PATH

12 questions, one per readiness signal, scored 1 to 4.

SCORE RANGE

12 to 48, grouped into four maturity tiers.

OUTPUT

Score, tier, top gap, next move, and one starter artifact.

SCOPE

A banker-level snapshot, not an examiner finding or institutional diagnostic.

The 12 readiness signals

The signal list separates capability from noise. A high Prompting Skill score says the banker can get useful answers. A lower Documentation score says the work may still be hard to reconstruct later. For this sample, the best next move is a simple evidence habit: save the prompt, unedited output, edits, final version, date, and use case for any AI-assisted work that leaves the desk.

One concrete next step

Every free readiness snapshot ends with one starter artifact tied to the lowest-scoring readiness signal. The sample artifact below is what a banker with a Documentation gap could use this week.

STARTER ARTIFACT · AI RECORDKEEPING TEMPLATE

Create one place to save AI-assisted work. For each item, capture six fields: date, task, tool, prompt, unedited output, and the edits or judgment applied before use. This is not bureaucracy. It is the evidence trail that lets a manager, reviewer, or examiner reconstruct what AI did and what the human decided.

What you would do with this real report

1. Read the score and tier once, then focus on the top gap.
2. Use the starter artifact on one real task this week.
3. Share the before/after with a manager or reviewer so the AI work becomes visible and repeatable.

What the In-Depth report adds

The free 12-question assessment is a snapshot. The **In-Depth Readiness Assessment** is a separate 48-question diagnostic across eight scored dimensions. It adds dimension-level analysis, a role-specific action plan, a reviewer-ready PDF report, and a practical 90-day next-step register for deeper planning.

NEXT STEP

Take the free assessment

Three minutes. No credit card. Your real score, your real top gap, your real starter artifact.

AIBankingInstitute.com/assessment/take

Source basis: Sample report based on the AiBI Readiness Assessment v3 free snapshot: 12 readiness signals, one question per signal, 1-4 scoring, total range 12-48, and shared free-readiness tier bands. The data above is illustrative; a real report uses the recipient's actual responses and role context.

This sample report is a starter artifact and sales/education preview, not legal advice, regulatory analysis, or an examiner-approved readiness finding. Adapt before adoption and validate real recommendations against the institution's actual assessment responses, governance context, and approved AI-use policy.
