Workflow owner

Department lead

Workflow name

AI-Assisted Procedure Summary Workflow

Business purpose

Use an approved AI tool to convert internal procedure text into a plain-English draft summary for staff review.

Approved tool

Approved AI writing assistant

Allowed inputs

Approved internal procedure text, role/audience, process owner, known exceptions, review owner.

Prohibited inputs

Customer names, account numbers, balances, transactions, SSNs, DOBs, confidential records, examiner correspondence, legal advice requests, SAR or AML case details, authentication details, API keys, passwords, or access tokens.

Prompt / task instructions

Rewrite the approved procedure text into a plain-English staff summary. Preserve policy meaning. Do not add requirements. Flag unclear or missing information with [VERIFY]. Label output as draft pending review.

Expected output

Draft staff-facing summary with purpose, key steps, exceptions, escalation triggers, and reviewer checklist.

Human reviewer

Department lead or process owner

Review standard

Reviewer confirms the source meaning was preserved, no prohibited data was included, uncertain items are flagged, escalation language is accurate, and the output is labeled draft until approved.

Approval checkpoint

The output may be distributed only after the human reviewer approves the final version.

Retention rule

Save only the reviewed final version and source reference in the approved internal repository or toolbox. Do not retain unreviewed drafts as official records.

Escalation triggers

Escalate to Compliance, Legal, InfoSec, or Risk if the workflow touches customer impact, credit, BSA/AML, fraud, authentication, complaints, examiner-facing material, confidential records, or uncertain regulatory interpretation.

Step 2 · Review

0/8 complete

Before this SOP is adopted

- ☐ Business purpose is clear
- ☐ Approved tool is named
- ☐ Allowed inputs are defined
- ☐ Prohibited inputs are explicit

☐ Human reviewer is identified

☐ Approval checkpoint is documented

☐ Retention rule is defined

☐ Escalation triggers are listed

How to use this template

Use for repeatable work

If the workflow will be reused, document it before scaling.

Name the reviewer

Medium and high-risk outputs need a clear accountable human owner.

Define the data boundary

Allowed and prohibited inputs should be clear before anyone runs the prompt.

Retain the reviewed version

Save final reviewed outputs, not messy draft exchanges, as the business record.
