

The Safe AI Use Checklist

A one-page checklist you can hand to your board, your AI committee, or any banker about to put work into a chat tool for the first time. Built to align with SR 11-7, Interagency TPRM, ECOA/Reg B, and the AIEOG AI Lexicon.

The four moves

Banker AI safety is not a 200-page policy. It is four habits, practiced every time. If your team can do these four things in their sleep, you have closed 90% of your exposure on day one.

1 · Strip sensitive data

- Remove customer names, account numbers, balances, transaction details, Social Security numbers, addresses, and dates of birth.
- Replace real identifiers with placeholders such as [CUSTOMER], [ACCOUNT TYPE], [DATE], [AMOUNT].
- Do not paste confidential bank records, examiner correspondence, or vendor contracts into public AI tools.
- If you would not email it to a stranger, do not paste it into a chat tool you do not control.

2 · Ask clearly

- State the role you want the AI to play, the task, the context, the format, and the constraints.
- Ask for a draft, a checklist, a summary, or a set of options — not a final decision.
- Tell the AI what **not** to do, especially when the work is customer-facing or regulated.

- If the first answer is wrong, change the prompt — do not bargain with the model.

3 • Fact-check outputs

- Verify numbers, dates, citations, policy claims, and procedural steps against your source documents.
- Mark anything uncertain with [VERIFY] and treat those items as unfinished work.
- Keep human judgment responsible for the final use of the output.
- If the AI cites a regulation, look up the regulation. The AI is not allowed to be your last source.

4 • Escalate risky decisions

- Escalate legal, compliance, credit, privacy, complaint, and customer-impacting decisions.
- Use approved internal tools and workflows for sensitive work — never a public chat tool.
- When uncertain, classify the use case as higher risk and route it through a documented review.

CITATIONS

Aligned with SR 11-7 (Federal Reserve model risk management), Interagency TPRM Guidance, ECOA / Regulation B, and the AIEOG AI Lexicon (US Treasury / FBIIC /

FSSCC, February 2026).

Distribution & sign-off

This page is intentionally designed to be the cover page of an internal AI use policy. Print it, sign it, and add it to your governance binder. The four habits above become a one-page expectation everyone in the bank can read.

Who should read this

TABLE REFLOWED FOR LARGE PRINT

Board / Audit committee

WHY

Documented governance posture before AI is in production use.

Compliance officer

WHY

One-page anchor for your AI governance framework — Gartner finds 55% of FIs have none.

Department heads

WHY

The expectation they will pass down to their teams in the next staff meeting.

Every frontline banker

WHY

The four moves they perform every time they open an AI tool.

What this is not

- This is not your AI policy. It is the cover page of your AI policy.
- This is not a substitute for SR 11-7 model risk management for any AI used in credit decisions, fraud, AML, or other regulated workflows.
- This is not a substitute for legal review of your vendor contracts and data-handling terms.

Next step

Pair this checklist with the AiBI **Red / Yellow / Green Use Card** for a complete two-page team huddle artifact. Then walk your team through the Foundations course so the habits become muscle memory.
