

ROLE PLAYBOOK · MARKETING · V2.0

The Marketing Leader's AI-Native Playbook

Adaptive campaigns. Faster content. Stronger review discipline.
A practical operating playbook for marketing leaders at
community banks and credit unions using AI to increase
campaign velocity, improve segmentation, monitor the market,
and produce clearer reporting without weakening compliance,
brand trust, or customer data controls.

The operating principle

AI drafts and detects. Marketing directs. Compliance approves. The source data proves.

AI can help the marketing team draft, personalize, summarize, test, monitor, package, and report. It should not invent product terms, bypass disclosure review, generate unapproved claims, target protected or sensitive groups improperly, or publish without human approval.

WHAT'S INSIDE

- | | |
|--|----------------------------------|
| 1. Executive snapshot | 8. AI marketing tooling patterns |
| 2. Why marketing often wins first | 9. Five marketing plays |
| 3. The AI-native marketing operating model | 10. Copy-paste templates |
| 4. Prepare vs. approve matrix | 11. 30-day implementation path |
| 5. Risk tiers for AI marketing | 12. Measurement model |
| 6. Adaptive marketing without losing control | 13. What good looks like |
| 7. Autonomous lead generation, governed | 14. Recommended AiBI path |
| | 15. Final operating principle |

Who this is for

- Chief Marketing Officers, Marketing Directors.
- Digital marketing teams, retail marketing teams.
- Deposit and loan campaign owners.
- Compliance partners reviewing marketing content.
- Data / analytics teams supporting segmentation.
- Executives asking how AI can improve growth without creating review risk.

The core problem

Community-bank marketing teams are expected to publish more campaigns, more content, more reporting, more segmentation, and more executive insight without more staff. AI helps. But marketing is still regulated work when it touches products, claims, disclosures, rates, fees, APYs, lending language, protected-class risk, UDAAP risk, or customer targeting.

The problem is not that marketers use AI. The problem is AI-assisted marketing with no brand prompt, no claim discipline, no review route, no data boundary, no proof of source, and no record of what was approved.

The opportunity

A safe AI marketing program can help teams create campaign kits faster; maintain consistent brand voice; generate channel-specific draft variations; monitor competitors and market signals; turn campaign metrics into executive narratives; build segment-aware messages without exposing customer files; create reusable marketing skills and campaign workflows; and reduce first-draft time and review-cycle rework.

Fastest safe surface for AI

Marketing is often the fastest safe surface for AI because much of the work is language-heavy, draft-heavy, and reviewable. Marketing teams already produce emails, landing page copy, branch flyers, social posts, product explainers, campaign briefs, executive reports, competitor summaries, and customer education materials. AI can accelerate those outputs. But marketing is not risk-free.

THE MARKETING RED LINE

AI must not generate or finalize: rates · APYs · fees · eligibility terms · guarantees · product disclosures · credit claims · regulated lending language · customer-specific recommendations · deceptive urgency language · unsupported competitor comparisons · unapproved financial advice.

AI can draft the marketing message. It cannot approve the claim, disclosure, offer, audience, or final send.

The five-layer marketing workbench

A modern AI marketing playbook moves beyond static calendar planning and one-off prompt experiments. The goal is not to let AI "run marketing" — it is to build a controlled marketing workbench where AI helps the team draft, test, package, monitor, and report faster, while the bank preserves brand, compliance, data, and customer trust.

Layer 1 · Brand system

AI needs a reusable brand voice and claim boundary. Artifacts: brand voice prompt; banned words list; approved tone examples; disclosure reminder language; product claim rules.

Layer 2 · Campaign workbench

AI helps produce complete campaign kits. Outputs: subject lines; preview text; email versions; social posts; landing page copy; branch flyer copy; web banner copy; call-center talking points; review checklist.

Layer 3 · Audience & segmentation rules

AI can help tailor language to segments, but customer-level targeting must follow approved segmentation, privacy, fair-lending, and UDAAP rules. Controls: no public-tool customer files; no protected-class proxies; no unapproved steering language; approved segment definitions only; compliance review before customer-facing use.

Layer 4 · Review & evidence

Every AI-assisted campaign output should have a review route. Reviewers may include the marketing owner, compliance, legal, product owner, lending / deposit subject matter expert, and an executive approver for sensitive claims.

Layer 5 · Measurement & learning

AI should help turn metrics into decisions. Track time saved, campaign output volume, first-pass compliance approval rate, review-cycle time, conversion rate, click-through rate, cost per acquisition, unsubscribes, complaints, complaint themes, content reuse, template adoption.

What AI can prepare and what humans must approve

MARKETING WORKFLOW	AI CAN PREPARE	HUMAN MUST APPROVE	EVIDENCE RETAINED
Brand voice	Draft voice prompt and examples	Final voice guide	Approved prompt, examples, owner
Campaign copy	Subject lines, email drafts, social posts	Final customer-facing copy	Drafts, reviewer, final version
Product campaigns	Message options and checklist	Rates, fees, APYs, disclosures, eligibility	Source terms, compliance approval
Segment messaging	Generic segment variants	Segment logic and send audience	Segment definition, review route
Market listening	Competitor and trend summaries	Strategic interpretation	Sources, summary, reviewer
Social monitoring	Theme and sentiment summary	Public response or escalation	Source links, response approval
Monthly reporting	Narrative summary of metrics	Final executive interpretation	Source metrics, AI narrative, edits
Custom tools	Draft utility or workflow	Deployment and data access	Code review, owner, access control

Three lanes

Green — generally safe

- Brainstorming campaign themes.
- Drafting internal marketing calendars.
- Creating fictional examples.
- Summarizing public competitor pages.
- Drafting brand voice options.
- Generating social post ideas for non-product education.
- Creating generic financial education content.

Controls: no customer data; no rates or product claims unless verified; human review before publication.

Yellow — approved tool and review required

- Customer-facing campaign copy.
- Product emails.
- Landing pages.
- Segment-aware messaging.
- AI-assisted reporting using internal metrics.
- Competitor analysis used in strategy.
- Branch flyer copy.
- Campaign scripts.

Controls: approved tool; source terms verified; disclosures reviewed; compliance approval before use; final copy retained.

 Red — restricted / special approval required

- AI-generated credit offers.
- Lending campaigns with eligibility or pricing language.
- Personalized financial recommendations.
- Use of customer-level data in public tools.
- Targeting based on sensitive or proxy-risk characteristics.
- Automated campaign send decisions without review.
- Public responses to complaints or regulatory topics.

Controls: no public AI tools; compliance / legal / product owner review; possible model risk, privacy, and fair-lending review; documented approval route; evidence retained.

Adaptive ≠ uncontrolled

AI-native marketing shifts the team from static, one-size-fits-all campaigns to adaptive engagement. But "adaptive" should not mean uncontrolled.

Safe adaptive campaign model

1. Marketing defines campaign objective.
2. Product owner confirms offer terms.
3. Compliance confirms claim and disclosure rules.
4. Data team defines approved audience or segment.
5. AI drafts channel-specific variations.
6. Marketing edits for brand.
7. Compliance reviews final copy.
8. Campaign launches through approved platform.
9. Metrics are reviewed.
10. AI helps summarize results and recommend next test.

What AI can adapt

- Tone.
- Length.
- Channel format.
- Subject lines.
- Call-to-action variants.
- Education angle.
- Segment-level message framing.
- Reporting narrative.

What AI cannot autonomously change

- Offer terms.
- Fees, APYs, rates.
- Eligibility criteria.
- Disclosures.
- Compliance-approved claims.
- Send audience for regulated products.
- Credit or lending recommendations.
- Exclusion logic tied to protected-class risk.

Signal detection — not autonomous targeting

AI can help identify high-intent signals and recommend outreach opportunities, but banks should avoid uncontrolled autonomous lead generation.

Use AI to support

- Signal detection.
- Lead scoring review.
- Campaign opportunity summaries.
- Generic segment-level messaging.
- Handoff to a human marketer or banker.

Do not use AI to independently

- Decide who gets a credit offer.
- Alter eligibility criteria.
- Infer sensitive traits.
- Create one-to-one financial advice without approval.
- Target based on unapproved third-party data.
- Launch regulated campaigns without review.

Governed lead workflow

1. Define the business objective.
2. Confirm allowed data sources.
3. Define approved segments.
4. Identify high-intent signals.
5. Generate campaign hypotheses.
6. Review for privacy, fair lending, UDAAP, and brand risk.
7. Human approves campaign rules.
8. AI drafts copy variants.
9. Compliance approves final copy.
10. Campaign launches in approved system.

Custom assistants, vibe-coding, and listening

Custom AI assistants

Marketing teams can use custom assistants for repeatable tasks. Each one should ship with a preloaded brand voice prompt, an approved data boundary, a banned-claim list, a disclosure reminder, output labeled draft, a review owner, and version control.

CUSTOM ASSISTANT

Social Media Manager

CUSTOM ASSISTANT

Marketing Email Drafter

CUSTOM ASSISTANT

Campaign Kit Builder

CUSTOM ASSISTANT

CEO Report Writer

CUSTOM ASSISTANT

Brand Voice Reviewer

CUSTOM ASSISTANT

Disclosure Risk Screener

CUSTOM ASSISTANT

Competitor Briefing Assistant

Vibe-coding for marketing tools

Marketing teams may use natural-language tools to build lightweight utilities — campaign brief generator, headline variation tool, content calendar builder, report narrative builder, asset checklist generator.

- No production customer data in prototypes.
- No direct publishing without approval.
- Code / workflow reviewed before use.
- Integrations require IT approval.
- Access tokens must be scoped and temporary.
- No direct connection to CRM, core systems, or email platforms without InfoSec review.

Sentiment and brand monitoring

AI can help summarize market and brand signals — public social posts, app reviews, complaint themes, call-center themes, competitor announcements, public regulatory updates.

- Cite sources.
- Do not overreact to unverified signal.
- Route complaint-related items to the approved complaint process.
- Retain source links for material claims.
- Do not let AI post public responses without human approval.

PLAY 1

Build the brand voice prompt

Create a reusable prompt that tells AI how the bank communicates.

Why it matters

Without a brand voice prompt, every AI output sounds like a vendor default. With one, first drafts require less editing and stay closer to the bank's tone.

Approved inputs

- Approved marketing examples.
- Brand guidelines.
- Audience description.
- Product positioning.
- Banned words.
- Tone preferences.
- Disclosure reminders.

Prohibited inputs

- Customer-level data.
- Confidential strategy documents in public tools.
- Unapproved rates, fees, APYs, or claims.
- Private customer complaints.

PROMPT TEMPLATE · BRAND VOICE PROMPT BUILDER

You are helping define the brand voice for a community bank or credit union.

Use the information below to create a reusable brand voice prompt that can be pasted into future campaign prompts.

Include:

1. Audience
2. Brand personality
3. Tone rules
4. Words and phrases to avoid
5. Product-claim boundaries
6. Disclosure reminders
7. Three examples of approved style

Bank description: [INSERT]

Audience: [INSERT]

Approved copy examples: [INSERT]

Banned words or tone: [INSERT]

Output: reusable brand voice prompt · banned language list · review reminders. **Review:** marketing owner and compliance approve before use. **Evidence:** source examples · brand voice prompt · approval date · version number. **Metrics:** editing time reduction · prompt reuse count · first-pass brand approval rate.

PLAY 2

Campaign kit generator

Produce first-draft campaign assets in batches.

Why it matters

A complete campaign often needs many small assets. AI can create the draft kit quickly if the team controls claims, terms, disclosures, and review.

Approved inputs

- Campaign goal.
- Audience or segment definition.
- Channel list.
- Approved product terms.
- Required disclosures.
- Brand voice prompt.
- Compliance constraints.

Prohibited inputs

- Unverified rates or fees.
- Invented deadlines.
- Unsupported claims.
- Customer-level files in public tools.
- Unapproved targeting logic.

PROMPT TEMPLATE · CAMPAIGN KIT

Using the approved brand voice and campaign brief below, draft a campaign kit.

Do not invent rates, APYs, fees, eligibility terms, deadlines, guarantees, or disclosures. If a required disclosure is missing, mark [DISCLOSURE NEEDED]. If a claim needs support, mark [VERIFY].

Output:

1. Five subject lines
2. Five preview text options
3. Email copy in three lengths: 80 words, 180 words, 320 words
4. Three social post drafts
5. Branch flyer headline options
6. Web banner copy
7. Compliance review checklist
8. Open questions

Campaign brief: [INSERT]
Required disclosures: [INSERT]
Brand voice: [INSERT]

Output: campaign draft kit · compliance flags · open questions · review checklist. **Review:** marketing edits; compliance reviews customer-facing copy before use. **Evidence:** campaign brief · AI draft · compliance edits · final approved copy · send date. **Metrics:** campaign draft time · number of assets produced · first-pass compliance approval rate · review-cycle time.

PLAY 3

Market listening brief

Create a weekly market and competitor brief.

Why it matters

Marketing leaders need to know what competitors, regulators, and consumers are saying, but few have time to monitor everything manually.

Approved inputs

- Public competitor announcements.
- Regulator press releases.
- Industry articles.
- Public social media themes.
- App review summaries.
- Source links.

Prohibited inputs

- Unverified claims without source.
- Confidential competitor information.
- Customer complaint details outside the approved process.
- Private customer data.

PROMPT TEMPLATE · FRIDAY MARKET BRIEF

Create a one-page Friday market brief for a community bank marketing team.

Use only the sources listed below. If a claim is not supported by a source, exclude it.

Output:

1. Five competitor signals
2. Three industry signals
3. One regulatory signal
4. Why each matters for our marketing calendar
5. Suggested next action
6. Source list

Sources: [INSERT SOURCE LINKS AND NOTES]

Bank market: [INSERT]

Brand voice: [INSERT]

Output: one-page market brief · source-linked implications · next-action list. **Review:** marketing lead reviews before sharing with CEO or leadership. **Evidence:** source list · AI summary · final brief · reviewer. **Metrics:** brief completion time · sources reviewed · actions generated · executive usage.

PLAY 4

Reporting that reads like a story

Turn campaign metrics into a one-page executive narrative.

Why it matters

Executives rarely need more tables. They need a clear answer: what worked, what did not, what changed, and what to do next.

Approved inputs

- Campaign metrics.
- Channel results.
- Conversion data.
- Cost data.
- Approved definitions.
- Marketing owner notes.

Prohibited inputs

- Invented metrics.
- Unverifiable benchmark claims.
- Customer-level data in public tools.
- Confidential strategy details in unapproved tools.

PROMPT TEMPLATE · CAMPAIGN PERFORMANCE NARRATIVE

Using only the campaign metrics below, write a one-page executive summary.

Do not invent numbers, benchmarks, causes, or attribution. If a metric is missing, mark [MISSING]. If a conclusion is uncertain, mark [VERIFY].

Output:

1. Executive headline
2. What worked
3. What did not work
4. What changed from prior period
5. What to test next
6. Risks or caveats
7. Data table summary

Metrics: [INSERT]

Marketing notes: [INSERT]

Output: executive narrative · metric caveats · next-test ideas. **Review:** marketing lead owns the final interpretation. **Evidence:** source metrics · AI narrative draft · edits · final report. **Metrics:** reporting time saved · executive read / use · decisions made from report · narrative corrections required.

PLAY 5

Segment-aware messaging workflow

Create message variants for approved segments without exposing customer-level data.

Why it matters

Community banks often have useful customer segments but underuse them in messaging. AI can help produce tailored language if the segment definitions are safe and approved.

Approved inputs

- Generic segment description.
- Audience need.
- Product or service area.
- Campaign goal.
- Approved offer terms.
- Channel.
- Required disclosures.

Prohibited inputs

- Customer names.
- Account-level data in public tools.
- Protected-class attributes.
- Proxy-risk variables without review.
- Sensitive personal details.
- Unapproved eligibility rules.

PROMPT TEMPLATE · SEGMENT-AWARE MESSAGING

Create three message versions for the approved segment below.

Do not use protected-class assumptions. Do not infer sensitive traits. Do not invent rates, fees, eligibility, APYs, deadlines, or guarantees. Mark missing disclosures with [DISCLOSURE NEEDED].

Segment description: [INSERT GENERIC SEGMENT DESCRIPTION]

Campaign goal: [INSERT]

Approved offer terms: [INSERT]

Output:

1. Message version A: direct
2. Message version B: educational
3. Message version C: relationship-focused
4. Risk flags
5. Disclosure reminders
6. Compliance review questions

Output: segment message variants · risk flags · disclosure reminders. **Review:** marketing and compliance approve before use. **Evidence:** segment definition · AI draft · compliance approval · final send copy.

Metrics: engagement by segment · review-cycle time · complaint rate · conversion lift · opt-out / unsubscribe rate.

Five reusable marketing artifacts

Template 1 · Campaign intake form

FIELD	RESPONSE
Campaign name	
Business objective	
Product / service	
Audience / segment	
Channel	Email / social / web / branch / paid / other
Offer terms	
Required disclosures	
Claims needing support	
Data used	
AI tool	
Risk tier	Green / Yellow / Red
Marketing owner	
Compliance reviewer	
Approval deadline	
Retention location	

Template 2 · AI marketing review checklist

- ☐ No rates, fees, APYs, deadlines, or eligibility terms were invented.
- ☐ Product terms match source documents.
- ☐ Required disclosures are included or flagged.

- Claims are supported by evidence.
- Copy does not create UDAAP risk.
- Lending copy was reviewed for ECOA / Reg B concerns where applicable.
- Segment logic is approved.
- No customer-level data was entered into an unapproved tool.
- Final copy was reviewed by the appropriate owner.
- Final approved version was retained.

Template 3 · Brand voice prompt

BRAND VOICE PROMPT SKELETON

You are writing as [BANK NAME], a community bank / credit union serving [MARKET].

Our voice is:

- [TRAIT 1]
- [TRAIT 2]
- [TRAIT 3]

We are not:

- hype-driven
- vague
- overly technical
- pushy
- casual about compliance

Rules:

- Do not invent rates, fees, APYs, deadlines, guarantees, or eligibility.
- Use plain language.
- Mark missing disclosures with [DISCLOSURE NEEDED].
- Mark unsupported claims with [VERIFY].
- Keep the tone helpful, clear, and locally grounded.

Approved examples:

[INSERT]

Template 4 · Monthly marketing narrative

SECTION	CONTENT
Executive headline	
What worked	
What underperformed	
Key metric movement	
Audience / segment insight	
Compliance or review issue	
Next test	
Decision needed	

Template 5 · Marketing evidence packet

For every AI-assisted campaign, retain:

- Campaign intake form.
- Source offer terms.
- Required disclosures.
- Brand voice prompt version.
- AI draft output.
- Human edits.
- Compliance review checklist.
- Final approved copy.
- Send date.
- Campaign metrics.
- Lessons learned.
- Retention location.

Build, draft, listen, segment

Week 1 — build the control base

Outcomes: approved AI tool selected; Safe AI Use Checklist distributed; brand voice prompt drafted; review checklist drafted; campaign intake form created.

Artifacts: brand voice prompt · AI marketing review checklist · campaign intake form.

Week 2 — draft two campaign kits

Outcomes: two campaigns drafted using AI; claims and disclosures reviewed; time saved logged; compliance review route confirmed.

Artifacts: two campaign kits · review comments · final approved copy.

Week 3 — launch market listening and reporting

Outcomes: first Friday market brief delivered; first AI-assisted performance narrative drafted; source and metrics discipline tested.

Artifacts: Friday brief · campaign performance narrative · source list.

Week 4 — run segment-aware messaging pilot

Outcomes: one approved segment selected; three segment-aware variants drafted; compliance reviews segment logic and copy; pilot results reviewed.

Artifacts: segment message variants · compliance approval · pilot summary · next-month campaign plan.

Productivity, quality, business, risk

Productivity

- Campaign drafts produced.
- Draft time per campaign.
- Editing time saved.
- Reporting time saved.
- Assets produced per campaign.
- Content calendar velocity.

Quality

- First-pass compliance approval rate.
- Unsupported claims flagged.
- Disclosure issues caught.
- Brand edits required.
- Final copy reuse.

Business

- Open rate.
- Click-through rate.
- Conversion rate.
- Cost per acquisition.
- Branch referral volume.
- Deposit / loan inquiry volume.
- Lead quality.
- Customer engagement.

Risk

- Complaint rate.
- Unsubscribe rate.
- Disclosure exceptions.
- UDAAP flags.
- Unsupported claim incidents.
- Segment-risk flags.
- Manual override frequency.

Ten questions the marketing team can answer at day 30

1. What brand voice prompt are we using?
2. Which campaigns used AI?
3. Which tool was approved?
4. What claims were verified?
5. What disclosures were reviewed?
6. Which segments were used?
7. Who approved the copy?
8. What evidence was retained?
9. How much time did we save?
10. What did we learn for the next campaign?

The goal is not autonomous marketing. The goal is AI-assisted marketing that is faster, more consistent, more measurable, brand-aligned, disclosure-aware, reviewable, source-supported, and compliant before publication.

From assessment to operating rhythm

1. Take the AI Readiness Assessment.
 2. Assign marketing leads to the Foundation Course.
 3. Complete the Red / Yellow / Green Use Card and Safe AI Use Checklist.
 4. Build the Brand Voice Prompt.
 5. Run the Campaign Kit Generator in the Sandbox.
 6. Save the Campaign Review Workflow to the Toolbox.
 7. Build the Marketing Report Narrative Skill.
 8. Reassess after 90 days.
-

Faster marketing, never careless marketing

AI can make bank marketing faster. It cannot make bank marketing careless. Marketing still owns the message. Product owns the offer. Compliance owns the review. The source documents own the facts.

AI drafts. Humans approve. The evidence stays with the campaign.

Sources: ECOA / Regulation B; UDAAP guidance; GLBA / Regulation P; Interagency Third-Party Risk Management Guidance; AIEOG AI Lexicon (US Treasury / FBIIC / FSSCC, February 2026); AiBI Foundations curriculum.

This playbook is a starter artifact, not legal advice or an examiner-approved marketing procedure. Adapt before adoption and route final campaign, claim, disclosure, and segmentation language through compliance and marketing review.
