

ROLE READINESS KIT - TRAINING / HR - V2.0

The Bank AI Role Readiness Kit

Turn generic AI awareness into role-specific practice, safe-use scenarios, and visible readiness tracking.

Role readiness, not generic awareness

AI training is complete when each role can practice safely, show the skill, and know when to stop.

AI adoption fails when training stays generic. Staff need to know which AI tasks are safe for their role, which data boundaries apply, which approved tools to use, where to escalate, and how to practice without real customer data. Training and HR make readiness observable instead of assumed.

Training Data Boundary Card

Do not use real customer stories, complaint records, employee performance details, medical information, or live personnel records in AI practice prompts.

AI may support training-path design, fictional scenarios, role practice, and readiness tracking. AI may not rank employees, evaluate performance, recommend discipline, screen applicants, determine accommodations, infer protected characteristics, or make employment-related decisions unless the use case has been separately reviewed and approved by HR, Legal, Compliance, and Information Security.

WHAT'S INSIDE

1. Training data boundary and employment firewall
2. What AI-ready means
3. Role training path examples
4. Role capability spec
5. Role training path template
6. Safe-use one-pager
7. Practice scenario pack
8. Capability tracker and manager sign-off
9. 30-day enablement runbook
10. 45-minute role readiness sprint

What AI-ready means

- ❑ Can classify a prompt by data risk.
- ❑ Can choose the approved tool.
- ❑ Can use a role prompt safely.
- ❑ Can remove prohibited data.
- ❑ Can mark uncertain output [VERIFY].
- ❑ Can identify the human review point.
- ❑ Can escalate a red use case.
- ❑ Can complete a fictional scenario.
- ❑ Can pass manager review.

Role path examples

ROLE	SAFE PRACTICE TASKS	REQUIRED BOUNDARY
Branch / Retail	Draft placeholder replies; translate procedures into job aids.	No real customer/account data in practice prompts.
Lending	Draft language from human-provided facts; map principal reasons to file support.	No AI-selected reasons or unreviewed credit-impacting output.
BSA/AML	Summarize fictional alerts; draft QA checklists.	No SAR, SAR existence, or live investigative details in practice tools.
Operations	Build reusable working briefs; create handoff SOPs.	No prohibited data in sandbox workflows.
Marketing	Draft campaign kits; verify source claims.	No customer-level data or unverified offer terms.
Compliance	Review use-case intake; identify review checkpoints.	No legal conclusions without qualified review.
IT / InfoSec	Classify tools; define data and access controls.	No secrets, credentials, or production data in practice prompts.
Executives	Read pilot scorecards; ask evidence questions.	No adoption decision without owner, metric, data boundary, and stop trigger.

Role Capability Spec

FIELD	RESPONSE
Role	
Two safe AI tasks staff may perform	
Approved tools	
Allowed inputs	
Prohibited inputs	
Human review point	
Escalation trigger	
Pass criteria	

Role Training Path Template

PATH ELEMENT	RESPONSE
Safe-use rule	
Role prompt	
Fictional scenario	
Sandbox exercise	
Review checklist	
Completion criteria	
Refresh cadence	

Safe-Use One-Pager

- ❑ Use only approved tools.
- ❑ Remove prohibited data before prompting.
- ❑ Use fictional scenarios for practice.
- ❑ Mark uncertain output [VERIFY].
- ❑ Route customer-facing, credit-impacting, employment-related, or regulated output to human review.
- ❑ Escalate red use cases before trying them.

Practice Scenario Pack

SCENARIO FIELD	RESPONSE
Role	
Fictional setup	
Approved source material	
Prompt to run	
Expected safe output	
[VERIFY] items	
Escalation trigger	

Capability Tracker

Track completion, demonstrated safe-use skill, scenario results, refresh date, and manager sign-off. Do not enter employee medical, accommodation, performance, disciplinary, protected-class, or subjective AI evaluations into AI tools or training trackers.

ROLE	SAFE-USE SKILL SHOWN	SCENARIO RESULT	REFRESH DATE	MANAGER SIGN-OFF
Pass / Retry				

Manager Sign-Off Card

- ☐ Staff member used approved tool.
- ☐ Staff member removed prohibited data.
- ☐ Staff member used role prompt correctly.
- ☐ Staff member marked uncertain output [VERIFY].
- ☐ Staff member identified human review and escalation point.
- ☐ Staff member completed fictional scenario and met pass criteria.

Build one role path and prove it works

By day 30, publish one role capability spec, one safe-use one-pager, three fictional scenarios, one sandbox exercise, a manager sign-off card, a capability tracker, and a readiness dashboard.

1. Week 1: Pick one role and define the two AI tasks staff may safely perform.
2. Week 2: Set the data boundary and write three fictional scenarios.
3. Week 3: Run one sandbox exercise and capture common failure points.
4. Week 4: Publish the capability tracker and manager sign-off card.

Next step: Run the 45-Minute AI Role Readiness Sprint

Pick one role, define the two AI tasks staff may safely perform, set the data boundary, build one fictional scenario, define the pass criteria, and publish the first capability tracker.
