

A 30-day "AI use map" for your institution

Find where AI is already happening — and where it is not.

Most community banks underestimate how much AI is already in use inside their walls. The Operations team is using a transcription tool. A loan officer is asking ChatGPT to summarize a credit memo. Marketing is generating copy. Nobody has written it down.

The first move is observation, not policy.

Three things you can do this week

1. **Send one question to every department head.** "Are you, or anyone on your team, using any AI tool — paid or free, sanctioned or not — for work? List what, who, and how often." Set a 7-day deadline.
2. **Build a single-page registry.** One row per tool: tool name, who uses it, what data they put into it, whether it is paid by the bank. Spreadsheet is fine. The point is to make the picture visible.
3. **Bring the registry to the next leadership meeting.** Do not propose action yet. Just present what is happening so leadership shares the same picture.

A starter prompt to send to your team

I am building a one-page registry of every AI tool in use across our institution. Please reply by Friday with: (1) tool name, (2) who on your team uses it, (3) what kinds of work they use it for, (4) whether the bank pays for it. No tool is too small. No use is too informal. The goal is visibility, not enforcement.

Why this is the right first step

You cannot govern what you cannot see. Examiners will eventually ask; the AIEOG AI Lexicon (US Treasury, Feb 2026) explicitly defines an "AI use case inventory" as a baseline expectation. Building it before the exam is easier than building it during one.
