Banker Prompt Types Cheat Sheet

Choose the work first, then write the prompt. Each type needs an allowed source, output format, reviewer, and data boundary.

Start with the six common jobs.

DRAFT

Create first-pass language.

Use for emails, scripts, summaries, huddle notes, and internal updates. Human approves before use.

SUMMARIZE

Condense approved material.

Use for public guidance, procedures, meeting notes, or de-identified themes. Check facts against the source.

REWRITE

Adjust tone, clarity, or length.

Preserve meaning. Do not add requirements, soften compliance language, or change product terms.

EXTRACT

Pull actions and open items.

Use for dates, risks, owners, evidence, missing facts, and review questions. Extraction is not verification.

COMPARE

Show differences and uncertainty.

Use for draft versus source, versions, vendor responses, or policy options. Do not ask for legal conclusions.

CHECKLIST

Turn work into steps.

Use for handoff, QA, training, review, and launch readiness. Reviewer confirms steps match approved source.

Advanced types

TYPE	USE IT FOR	BANK-SAFE CAUTION
Critique	Flag unsupported claims, vague language, missing disclosures, unclear steps, or risk flags.	AI flags possible issues. It does not approve or reject.
Scenario	Create fictional training examples, role plays, quiz cases, or coaching material.	No real customer, employee, vendor, alert, complaint, or investigation details.
Data-to-narrative	Explain approved aggregate metrics in plain English.	Use aggregate or de-identified data unless the tool is approved for the data class.
Solution brief	Turn workflow pain into a problem, user, constraint, test, and handoff note.	Keep it internal and move buildable ideas into the Banker Builder Brief Kit.

PROMPT RULE

If the type asks AI to decide, approve, deny, file, send, publish, investigate, or retain final output, rewrite it. The prompt should ask for draft support and require human review.
