

REVIEW CHECKLIST - V1

Prompt Output Review Checklist

Use this before a banker copies, downloads, sends, files, publishes, retains, or reuses AI-assisted output.

Require all six checks before output moves downstream.

A good AI answer is still a draft. The reviewer must confirm that the input was safe, the tool was allowed, uncertainty is marked, and final use is allowed for the risk lane.

❑ **Sensitive data removed:** Customer names, account numbers, balances, transaction details, SSNs, DOBs, complaint specifics, SAR/AML case facts, credentials, and examiner-sensitive material were removed or replaced with approved placeholders.

❑ **Tool approved:** The AI tool is approved for this data class.

❑ **Draft support only:** The prompt asked for draft support, not a final decision.

❑ **Format clear:** The prompt named the output format: bullets, table, checklist, email draft, script, FAQ, SOP, memo, markdown, or evidence packet.

❑ **[VERIFY] required:** Uncertain, unsupported, missing, or source-dependent items must be marked [VERIFY].

❑ **Reviewer and escalation named:** The human reviewer and escalation trigger are clear before downstream use.

MOVE TO SOP WHEN REPEATED

If the same prompt becomes a team practice, move it into the Workflow SOP Builder. A reusable prompt needs an approved tool, allowed inputs, prohibited inputs, reviewer, approval checkpoint, escalation path, and retention rule.
