

AI Use-Case Inventory

Reference card · For community banks and credit unions

A one-page register of every AI-touched workflow inside your institution. Maintain it. Bring it to your next AI committee meeting. Hand it to your examiner before they ask.

Why this exists

The AIEOG AI Lexicon (US Treasury / FBIIC / FSSCC, February 2026) names the "AI use case inventory" as a baseline expectation for institutions of any size. SR 11-7 (Federal Reserve / OCC) treats AI tools as models — and models in production must be inventoried. The cheapest examiner-readiness move in community banking is keeping this list current.

How to use this template

1. Survey every department. Ask the same question twice: "Are you using AI for any work task?" and "Is any vendor providing you AI-powered features you may not have classified as AI?"
2. Capture one row per workflow, even when the same tool covers multiple workflows.
3. Review quarterly. Add new workflows; retire dormant ones; update the oversight column when a workflow's risk profile changes.

The inventory

#	Workflow	AI tool	Data class	Owner	Oversight	Last reviewed
1	[e.g. BSA narrative drafting]	[tool name / version]	[Green / Yellow / Red]	[name]	[automated / sampled / mandatory]	YYYY-MM-DD
2						
3						

#	Workflow	AI tool	Data class	Owner	Oversight	Last reviewed
4						
5						
6						
7						
8						
9						
10						

Add rows as needed. Most community institutions surface 9–14 workflows on the first pass.

Column definitions

- **Workflow** — the actual task, in plain language. Not the system name.
- **AI tool** — the specific product and version. "Microsoft 365 Copilot" not "Microsoft."
- **Data class** — Green (public), Yellow (internal non-NPI), Red (NPI / PII / loan files).
- **Owner** — a person, not a role.
- **Oversight** — automated (no review), sampled (random spot-check), or mandatory (every output reviewed).
- **Last reviewed** — the date a human verified that the row still describes how the workflow actually runs.
